

# Contents

<b>Preface</b> .....	<b>xi</b>
----------------------	-----------

<b>Output analysis for approximated stochastic programs</b> .....	<b>1</b>
<i>J. Dupačová</i>	

1. Introduction .....	2
2. Methods of output analysis .....	4
3. Concluding remarks .....	22
References .....	23

<b>Combinatorial Randomized Rounding: Boosting Randomized Rounding with Combinatorial Arguments</b> ...	<b>31</b>
<i>P. Efraimidis, P. G. Spirakis</i>	

1. Introduction .....	32
2. A Scheduling Problem .....	33
3. Rounding and Deviations .....	36
4. Combinatorial Randomized Rounding .....	41
5. Analysis .....	42
6. Conclusions .....	48
7. Acknowledgements .....	48
References .....	49
Appendix .....	50

<b>Statutory Regulation of Casualty Insurance Companies: An Example from Norway with Stochastic Programming Analysis</b> .....	<b>55</b>
<i>A. Gaiivoronski, K. Høyland, P. de Lange</i>	

1. Introduction .....	56
2. Problem outline .....	58
3. Model description .....	61
4. Numerical analysis .....	71
5. Conclusion .....	81
References .....	82

<b>Option pricing in a world with arbitrage</b> .....	<b>87</b>
<i>X. Guo, L. Shepp</i>	
1. Introduction .....	87
2. Option pricing under the new model .....	90
References .....	94
<b>Monte Carlo Methods for Discrete Stochastic Optimization</b> .....	<b>97</b>
<i>T. Homem-de-Mello</i>	
1. Introduction .....	98
2. Sample-path methods .....	100
3. Variable-sample methods .....	109
4. Conclusions .....	116
References .....	117
<b>Discrete Approximation in Quantile Problem of Portfolio Selection</b> .....	<b>121</b>
<i>A. Kibzun, R. Lepp</i>	
1. Introduction .....	122
2. Essence of the Stock-Exchange Paradox .....	122
3. Logarithmic and Risky Strategies .....	125
4. Confidence strategy .....	127
5. Discrete approximation of the quantile problem .....	131
6. The simulation results .....	133
References .....	134
<b>Optimizing electricity distribution using two-stage integer recourse models</b> .....	<b>137</b>
<i>W. K. Klein Haneveld, M. H. van der Vlerk</i>	
1. Introduction .....	138
2. Contract with power plants .....	140
3. Supply schedule for the next day .....	147
4. Conclusions .....	152
References .....	153

**A Finite-Dimensional Approach to Infinite-Dimensional  
Constraints in Stochastic Programming Duality ..... 155**

*L. Korf*

1. Introduction .....	155
2. The deterministic equivalent problems .....	158
3. Finite-dimensional duality and optimization .....	160
4. Duality theorems in stochastic programming .....	163
5. Analysis and solution techniques .....	164
References .....	167

**Non-Linear Risk of Linear Instruments ..... 169**

*A. Kreinin*

1. Introduction .....	169
2. The Model .....	172
3. The Density Function $p_{\Delta V}$ .....	173
4. Extreme Points of the Density Function .....	176
5. Numerical examples .....	178
6. Conclusion .....	178
References .....	181

**Multialgorithms for Parallel Computing:**

**A New Paradigm for Optimization ..... 183**

*J. Nazareth*

1. Introduction .....	183
2. A New Paradigm for Optimization .....	186
3. CG Multialgorithms: An Illustration .....	193
4. Computational Experiments .....	197
5. Discussion of the Multialgorithms Paradigm .....	202
6. General Considerations .....	208
7. Conclusions .....	216
8. Acknowledgements .....	216
References .....	216

<b>Convergence Rate of Incremental Subgradient Algorithms</b> .....	<b>223</b>
<i>A. Nedić, D. Bertsekas</i>	
1. Introduction .....	224
2. Estimates for Convergence Rate of the Incremental Subgradient Method .....	226
3. An Incremental Subgradient Method with Randomization .....	243
References .....	262
<b>Transient Stochastic Models for Search Patterns</b> .....	<b>265</b>
<i>E. Pasiliao</i>	
1. Introduction .....	265
2. Problem description .....	267
3. Closed network approximation .....	268
4. Open network .....	272
5. Two-stage program .....	274
6. Discussion .....	275
References .....	276
<b>Value-at-Risk Based Portfolio Optimization</b> .....	<b>279</b>
<i>A. Puelz</i>	
1. Introduction .....	280
2. VaR – Measurement and Validity .....	282
3. Var Based Model Forms .....	284
4. Model Tests .....	290
5. Conclusions .....	297
6. Appendix – Solution procedures for the SP-A model .....	298
References .....	300
<b>Combinatorial Optimization, Cross-Entropy, Ants and Rare Events</b> .....	<b>303</b>
<i>R. Y. Rubinstein</i>	
1. Introduction .....	304
2. Estimation of Probabilities of Rare-Events for Markov Chains .....	311
3. TSP, ASN and Rare-Events .....	318

4. The Main Algorithm .....	322
5. Quadratic Assignment Problem .....	329
6. Extensions .....	331
7. Noisy Networks .....	335
8. Numerical Results .....	343
9. Concluding Remarks and Directions for Further Research .....	357
References .....	358

**Consistency of Statistical Estimators:  
the Epigraphical View .....** **365**

*G. Salinetti*

1. Introduction .....	365
2. Consistency of statistical functionals: a preliminary view .....	367
3. Convergence of sets and epi-convergence of functions .....	369
4. Weak convergence of probability measures and epi(hypo)- convergence .....	371
5. Convergence of empirical processes, Glivenko-Cantelli theorem and epi-strong law of large numbers .....	374
6. Consistency of statistical estimators .....	377
References .....	381

**Hierarchical Sparsity in Multistage Convex  
Stochastic Programs .....** **385**

*M. Steinbach*

1. Introduction .....	385
2. Problem class .....	387
3. Interior point approach .....	391
4. Tree-sparse solution algorithm .....	394
5. Local sparsity .....	401
6. Conclusions .....	406
7. Acknowledgements .....	407
References .....	407

**Conditional Value-at-Risk: Optimization Approach .....** **411**

*S. Uryasev, R. T. Rockafellar*

1. Introduction .....	412
2. Approach .....	414

3. Key Formal Results .....	416
4. Application Examples .....	419
5. Concluding Remarks .....	431
References .....	432
