

# Contents

<b>Preface</b> .....	vi
----------------------	----

<b>Introduction to the Theory of Probablistic Functions and Percentiles</b> .....	1
---	---

*S. Uryasev*

1. Introduction .....	1
2. Sensitivity analysis of probablistic functions .....	2
3. The gradient of the quantile (Value-at-Risk) .....	11
4. Optimization with Conditional Value-at-Risk performance function and constraints .....	14
5. Conclusion .....	21
References .....	21

<b>Pricing American Options by Simulation Using a Stochastic Mesh with Optimized Weights</b> .....	26
--	----

*M. Broadie, P. Glasserman, Z. Ha*

1. Introduction .....	27
2. Problem formulation .....	28
3. Stochastic mesh method .....	29
4. Weights via optimization .....	34
5. Some Numerical Examples .....	36
6. Conclusion .....	43
References .....	43

<b>On Optimization of Unreliable Material Flow Systems</b> .....	45
--	----

*Yu. Ermoliev, S. Uryasev, J. Wessels*

1. Introduction .....	46
2. Description of the model .....	47
3. Optimization problem .....	50
4. Approaches to solve the optimization problem .....	53
5. Example calculations .....	58
References .....	59
6. Appendix A. Description of the analytic perturbation analysis .....	61
7. Appendix B. Analytical derivatives of the integrals over sets given by inequalities .....	64

<b>Stochastic Optimization in Asset &amp; Liability Management: A Model for Non-Maturing Accounts</b> .....	67
---	----

*K. Frauendorfer, M. Schürle*

1. Introduction .....	67
2. A model for uncertain maturities .....	70
3. Multistage stochastic programs .....	75
4. Barycentric approximation .....	80
5. Reinvestment of savings accounts .....	92
6. Conclusions and outlook .....	94
References .....	96

**Optimization in the Space of Distribution Functions  
and Applications in the Bayes Analysis .....** 102

*A. N. Golodnikov, P. S. Knopov, P. M. Pardalos, S. P. Uryasev*

1. Introduction .....	103
2. Sensitivity to a prior distribution in a binomial sampling .....	104
3. Problem statement .....	108
4. Optimization linear functional under constraints of inequality type .....	112
5. Optimization linear functional under fixed moments .....	120
6. Optimization linear-fractional functional under constraints of inequality type .....	125
7. Results of numerical calculations .....	129
References .....	131

**Sensitivity Analysis of Worst-Case Distribution for  
Probability Optimization Problems .....** 132

*Yu. S. Kan, A. I. Kibzun*

1. Introduction .....	132
2. Problem statement .....	134
3. The uniformity principle .....	134
4. Sensitivity analysis .....	140
5. Conclusion .....	146
References .....	147

**On Maximum Reliability Problem in Parallel-Series  
Systems with Two Failure Modes .....** 148

*V. Kirilyuk*

1. Introduction .....	148
2. Problem statement and main results .....	150
3. Appendix : Lemmas. Proofs of theorems .....	154
References .....	159

**Robust Monte Carlo Simulation for Approximate**

<b>Covariance Matrices and VaR Analyses</b> .....	<b>160</b>
<i>A. Kreinin, A. Levin</i>	
1. Introduction .....	161
2. Stability of VaR computation .....	163
3. The method of the minimal symmetric pseudoinverse operator .....	165
4. Bounds on the Value-at-Risk .....	169
5. Examples .....	170
6. Conclusion .....	171
References .....	171
<b>Structure of Optimal Stopping Strategies for American Type Options</b> .....	<b>173</b>
<i>A. G. Kukush, D. S. Silvestrov</i>	
1. Introduction .....	173
2. Optimal stopping in a discrete time model .....	174
3. The case of American call options .....	178
4. The case of piecewise linear convex pay-off function .....	181
5. The case of an arbitrary convex pay-off function .....	182
References .....	185
<b>Approximation of Value-at-Risk Problems with Decision Rules</b> .....	<b>186</b>
<i>R. Lepp</i>	
References .....	196
<b>Managing Risk with Expected Shortfall</b> .....	<b>198</b>
<i>H. Mausser, D. Rosen</i>	
1. Introduction .....	198
2. Parametric approach .....	200
3. An example FX portfolio .....	204
4. Simulation-based approach .....	206
5. The FX portfolio revisited .....	210
6. Example - the NIKKEI portfolio .....	212
7. Smoothing the nTRP .....	214
8. Conclusions .....	218
References .....	218
<b>On the Numerical Solution of Jointly Chance Constrained Problems</b> .....	<b>220</b>
<i>J. Mayer</i>	

1. Introduction .....	220
2. Problem formulation .....	221
3. Numerical considerations .....	223
4. Algorithms .....	225
5. Implementation .....	227
6. Computational results .....	228
References .....	233

**Management of Quality of Service through  
Chance-constraints in Multimedia Networks ..... 236**  
*E. A. Medova, J. E. Scott*

1. Introduction .....	237
2. Effective bandwidth as a deterministic measure of stochastic multiservice traffic .....	238
3. The chance-constrained stochastic programme .....	242
4. Pricing mechanism .....	245
5. Implementation .....	246
6. Conclusions .....	249
References .....	249

**Solution of a Product Substitution Problem  
Using Stochastic Programming ..... 252**  
*M. R. Murr, A. Prékopa*

1. Introduction .....	252
2. Programming under probabilistic constraint .....	254
3. The deterministic problem .....	256
4. The stochastic programming problem .....	258
5. Modeling the variability of the production .....	261
6. Description of the data .....	262
7. Solution method .....	264
8. Computational results for production and demand both random (case 2) .....	267
9. Conclusion .....	268
References .....	269

**Some Remarks on the Value-at-Risk and the  
Conditional Value-at-Risk ..... 272**  
*G. Ch. Pflug*

1. Introduction .....	272
2. Properties of VaR and CVaR .....	274
3. Relations between VaR and CVaR .....	277
4. VaR- and CVaR- optimal portfolios .....	278
References .....	281

<b>Statistical Inference of Stochastic Optimization</b>	
<b>Problems</b> .....	<b>282</b>
<i>A. Shapiro</i>	
1. Introduction .....	282
2. The Delta method .....	286
3. First order asymptotics of the optimal value .....	291
4. Second order expansions of the optimal value and asymptotics of optimal solutions .....	295
5. Examples and a discussion .....	302
References .....	304
